sandeepsajan0@gmail.com

SUMMARY:

Skilled Backend Engineer specializing in **Python**, **Django**, and **FastAPI** with 6+ years of experience delivering end-to-end web solutions. Streamlined complex business logic and boost staff productivity through custom CMS configurations (Wagtail). Proven expertise in building robust REST APIs to seamlessly connect distributed systems, managing **WebSockets**, and handling **CPU-intensive workloads with async processing**. Managed seamless deployments on AWS using modern CI/CD practices.

EXPERIENCE:

Full-stack Developer | The Motley Fool(via Remote Inning) | *July 2021 - June 2026* | Remote

- Improved TMF website, migrated from MVT monolithic architecture to microservices-based distributed system including a headless CMS.
- **Trimmed development time by ~35%** by enabling the non-technical staff to manage content through Wagtail CMS.
- **Increased company sales** by implementing a reusable service plan grid with Wagtail snippets and tools.
- Increased user interactivity by implementing a ticker slider with real time data for highlighted tickers or quotes.
- Implemented **Redis caching** for real-time quote data to avoid hitting **rate-limit issues** on the FMP APIs.
- Improved site performance with **Redis data caching**, query optimizations, and custom pagination styles to handle heavy traffic.

Python/Django Developer | Open Tech Fund(via Remote Inning) | *July 2021 - July 2025* | Remote

- Enhanced Hypha to improve its operational efficiency, flexibility, security and long-term maintainability.
- **Boosted staff productivity by ~25%** through strategic updates to dashboards and by implementing an automated task list with notifications.
- **Improved user response rate** by implementing a co-applicants feature with customizable permissions.
- **Reduced third-party costs** by developing an internal post-application system for budgeting, contracting, and invoicing.
- Integrated slack notifications using **Django Channels(websocket)** and leveraged **Celery/Redis for async task management** to process background workloads efficiently.
- Implemented **Celery and Redis to handle CPU-intensive background tasks**, including file uploads, formatting, token-based email invites, and notifications.
- Modernized Hypha UI using HTMX, Alpine.js, and Tailwind CSS; fully customized it for the clients like Urgent Action Fund.

Python/Django Developer | Eoraa | *April 2020- July 2021* | Remote

- **Led the backend team** and built **hundreds of APIs** by focusing on development, security, and seamless integrations with the distributed system.
- **Set up CI/CD pipelines** and managed software deployment across a multi-environment cloud configuration.
- Configured **AWS WAF**, **classic load balancer**, and related services to ensure a secure, maintainable, and scalable production environment.
- Maintained stable, persistent connection between physical key box hardware and backend software APIs using **WebSockets**.
- **Achieved a 10x reduction** in data migration time during the migration of a PHP-based web app to Django.

PROJECTS / INTERSHIPS:

- **Spoonshot | Intern | (May - Aug 2019)**
Enhanced crawler and scraper performance by **10x**. Built a custom proxy manager to bypass ip blocks. Collaborated closely with the **data science team** to maximize the value of extracted data.
- **Google Summer of Code | Intern | (May - Aug 2018)**
Built Hydra, a CLI client for hydrus(Hypermedia REST APIs), using **Redis** as a graph datastore and OpenCypher for querying. **Dockerized** the tool and developed a minimal web UI.
- **RAG pdf-chatbot | Project**
Built a FastAPI based RAG system with pg vector storage and Google gemini LLM to convert any pdf to an AI chatbot. Built **FastAPI endpoints** to upload files, process text into vector embeddings and manage complex user query. Optimized text chunking strategies to handle data processing efficiently, minimize LLM hallucination, and ensure accurate results
- **GPT Clone | Project**
Built a lightweight **ChatGPT-style** interface with Django, Htmx, and **GPT4All** to explore **LLM** and **gen-AI**. Focused on backend **integration of LLMs** and prompt-based interactions.
- **Disperse | Project**
Built a custom hybrid mobile app backend in Python and Flutter, combining local delivery and logistics workflows (similar to Rapido/Blinkit) for rural and local usage. It helped users coordinate regional package collection and transport by tracking real-time locations. Built it with **django channels(websockets)** for real-time connections, alongside an asynchronous approach for instant push notification.

SKILLS: Python, Django, Wagtail CMS, DRF, FastAPI, PostgreSQL, Git/Github, React.js, Next.js, JavaScript, Alpine.js, Tailwind CSS, Htmx, Websockets, AWS, Heroku, Docker, Linux, LLM, RAG, gen-AI

EDUCATION: Bachelor of Technology(CSE) - SMVDU - (2016 - 2020)
