

SUMMARY:

Skilled **Python/Django** developer with **5+ years** of experience building web applications. I boost staff and admin productivity through **Wagtail CMS** and **Django admin** customizations. Built 100s of **REST APIs** to connect different frontends/systems seamlessly. Prefer modern frontend tools like **Htmx** and **Alpine.js** to create optimized and user-friendly UIs. Deploy apps to **AWS** and **Linux** servers(both manual and **Docker**-based) and integrate **CI/CD** with **GitHub Actions**.

EXPERIENCE:

Remote Inning - Full-stack Developer - (Remote) - (July 2021 - Present)

- **Collaborated with distributed teams** of international clients like **The Motley Fool** and **Open Tech Fund**. Dived into code development, ongoing support, and smooth collaboration to deliver impactful results.
- **Led** enhancements and maintenance to an **open-source** software(Hypha) adopted by Open Tech Fund and about 10 other orgs, improving its **efficiency**, **flexibility**, and **security** while making it **easier to maintain** long-term.
- Designed and implemented a **co-applicant feature** to support multi-user access with customizable permissions, allowing applicant orgs to share tasks among team members resulting **faster actions**, **more visibility**, and **less errors**.
- **Boosted OTF staff productivity by roughly 25%** through strategic updates to their dashboards, automating task tracking via a **dynamic to-do list**, and empowering them with dynamic features through **Wagtail admin**.
- Built an internal system for the post-application workflows in Hypha, including budget approvals, contracting, invoicing, and reporting to **cut off third-party software costs** and **streamline workflows** inside Hypha for the Finance and Compliance team.
- **Modernized** Hypha UI by replacing outdated jQuery with **Alpine.js** and vanilla js, **optimized** pages using **Htmx** to reduce **page load time**. Switched to **Tailwind CSS** for cleaner, easier to maintain, and rapid development of code.
- **Customized Hypha** for Urgent Action Fund and provided them support for **seamless deployment** of additional features.
- Built **dynamic features** like service plans, real-time ticker bar, and promotional/alert banners with **wagtail** that allows non-technical staff to update these by themselves via wagtail admin resulting trimming **developer turnaround time by around 40%**.
- Introduced full editorial control over navigation, footers, and page content via **Wagtail's StreamField** and other blocks that made the site more dynamic and flexible.
- Optimized site performance with **data caching**, **query optimizations**, different **paginations designs**, and by keeping other internal libraries updated.

Eoraa - Python/Django Developer - (Remote) - (April 2020- July 2021)

- **Led the backend team** for key-door management software, focusing on development, security, and seamless integration with hardware systems.
- Developed and maintained **100+ APIs using DRF** for the admin dashboard and CMS.

- **Set up CI/CD pipelines** and deployed the software on AWS, configuring multiple environments for development, staging, and production.
- Configured **AWS WAF**, **classic load balancer**, and related services to ensure a secure, maintainable, and scalable production environment.
- Successfully migrated an old PHP-based web application to a new tech stack using Django and PostgreSQL. **Achieved a 10x reduction** in data migration time through the optimization of queries and implementation of advanced techniques.

PROJECTS / INTERNSHIPS:

- **Spoonshot - Intern - (May - Aug 2019)**
Enhanced crawler and scraper performance by **10x** by developing optimized features and APIs using Django/DRF.
Built a custom proxy manager to bypass ip blocks. Collaborated closely with **data science team** to maximize the value of extracted data.
Tech: Python, Django, jet, mysql, selenium, grafana, indexdb
- **Google Summer of Code - Intern - (May - Aug 2018)**
Built Hydra, a CLI client for hydrus(Hypermedia REST APIs), using **Redis** as a graph datastore and OpenCypher for querying.
Dockerized the tool and developed a minimal web UI to make API interactions more accessible.
Tech: Python, Flask, Redis, REST APIs, Docker
- **GPT Clone - Project**
Built a lightweight **ChatGPT-style** interface with Django, Htmx, and **GPT4All** to explore **LLM**, and **gen-AI**. Focused on backend **integration of LLMs** and prompt-based interactions.
Tech: Python, Django, Htmx, GPT4All, LLMs, Gen-AI
- **Backend APIs - Project**
Developed basic auth APIs to explore key concepts such as **JWT Auth**, Sendgrid integration, user activation, user role-based permissions, multi-environment settings configurations, and deployment to live servers.
Tech: Python, Django, DRF, JWT, Sendgrid, Heroku, Linux

EDUCATION:

Bachelor of Technology (2016-2020)

Shri Mata Vaishno Devi University, Katra, India

SKILLS:

Proficient - Python, Django, Wagtail, DRF, PostgreSQL, Git/Github.

Familiar - React, Javascript, jQuery, Alpine, Tailwind, Htmx, LLM, gen-AI, AWS, Heroku, Docker, Linux, Bash
